ABOUT US

Using our website, anyone of any age can easily engage in charity work from anywhere in the world.

The website provides a list of organisations with different profiles
you can donate money for higher education, medical facilities, helping children from orphanages to realise their dreams, investing in the development of innovative technologies or industrial plants

HOW IT WORKS?

Kartoha is a website that rounds up your purchases and donates excess amounts to charity

Suppose if you buy flowers and the amount for them will be 7897 tenge, you can turn on the rounding function on our website (for this, the choice will be rounded to tens, hundredths, etc.) to 7900 or 8000 tenge. The difference from the rounded up amount goes to charity, user chooses where to donate the money

TOOLS

C# ASP.NET(.NET Framework) and
Oracle SQL

.NET is a developer platform made up of tools, programming languages, and libraries for building many different types of applications. It's a free, cross-platform, open source developer platform.

DATABASE

Oracle SQL provides an easy, elegant, performant architecture for accessing, defining, and maintaining data. Use SQL with Oracle and PHP, Java, Python, .NET, Hadoop, Node.js, or APEX

Oracle SQL is one of the most widely used database management systems around the world. It's well suited to power primarily commercial and enterprise applications, and is particularly popular at large companies with mission-critical databases.

TEAM WORK

During the project, we encountered several problems
It was difficult to find the database we needed
As each of us has a different area of expertise, but mostly not
related to website development, application development was
difficult to complete the project
